PROFESSIONAL SUMMARY

Innovative and results-driven MCA student with hands-on experience across full-stack web development, cloud infrastructure (AWS EC2, S3, Lambda), containerization (Docker, Kubernetes), CI/CD automation, and machine learning — delivering 5 end-to-end projects across healthcare, finance, hospitality, and AI domains. Proficient in Python, Django, Flask, REST APIs, and cloud-native deployment workflows with a strong focus on scalable, production-ready systems. Seeking internship or entry-level roles in Software Development, Cloud/DevOps Engineering, Python/Full-Stack Development, or AI/ML Engineering.

TECHNICAL SKILLS

Languages:	Python, JavaScript (ES6+), HTML5, CSS3, Java, Bash (basic)
Frameworks:	Django, Flask, Streamlit, REST API Design, CRUD Operations, MVC Architecture
Cloud — AWS:	EC2 (compute), S3 (object storage), Lambda (serverless), IAM (access management), VPC (networking) — hands-on experience deploying and managing cloud resources
DevOps & CI/CD:	Docker (containerization), Kubernetes (orchestration), GitHub Actions, Jenkins, CI/CD pipeline design, Infrastructure-as-Code concepts
ML & Data:	Scikit-learn, Gradient Boosting, Feature Scaling, Pandas, NumPy, Jupyter Notebook
Databases:	MySQL, SQLite — Schema Design, Query Optimization, Normalization, CRUD
Tools:	Git, GitHub, VS Code, Postman (API testing), Linux (CLI), Responsive Web Design
Core Concepts:	OOP, Role-Based Access Control, Agile, REST, Microservices, Cloud Security basics

PROJECTS

- Hostel Management System** *Python · Django · SQLite · Kubernetes · HTML5 · CSS3 · JavaScript*
 - Built a multi-role (Admin, Warden, Student) web application for room allocation, booking management, and student record tracking with granular role-based access control.
 - Orchestrated scalable container deployment using Kubernetes; designed a zero-redundancy normalized SQLite schema for rooms, bookings, and payment records.
 - Integrated a payment tracking module enabling admins to view outstanding dues and generate per-student financial summaries — reducing manual billing effort significantly.
- Blood Bank Management System** *Python · Flask · MySQL · REST API · Docker · HTML5 · CSS3 · JavaScript*
 - Architected a full-stack blood bank platform supporting 3 user roles (Admin, Donor, Requester) with real-time blood inventory tracking and containerized deployment via Docker.
 - Designed RESTful APIs using Flask for all CRUD operations; optimized MySQL schema with indexing to handle concurrent donor and request transactions efficiently.
 - Built an automated inventory alert engine that flags critical blood group shortages, improving emergency response coordination and donor-requester matching speed.
- Loan Management System** *Python · Django · SQLite · REST API · GitHub Actions (CI/CD) · HTML5 · CSS3 · JavaScript*
 - Developed a role-based loan portal (Admin & User) managing the full loan lifecycle: application submission, credit approval, EMI scheduling, and repayment tracking.
 - Integrated a GitHub Actions CI/CD pipeline to automate testing and deployment workflows, ensuring code quality on every commit and eliminating manual release overhead.
 - Engineered a normalized relational database schema covering customer profiles, loan records, EMI schedules, and transaction logs — achieving zero data redundancy.

Breast Cancer Diagnosis Prediction System [Python](#) · [Scikit-learn](#) · [Gradient Boosting](#) · [Streamlit](#) · [Pandas](#) · [NumPy](#) · [AWS S3](#)

- Engineered an ML web application predicting breast cancer diagnoses (benign/malignant) from 30 clinical features using a Gradient Boosting Classifier with Standard Scaler feature scaling.
- Deployed the application on AWS, storing model artifacts on S3 and serving real-time predictions via an interactive Streamlit dashboard — enabling instant clinical decision support.
- Optimized model accuracy through hyperparameter tuning and cross-validation, achieving consistent and reliable prediction performance across diverse patient datasets.

Personal Portfolio Website [HTML5](#) · [CSS3](#) · [JavaScript](#) · [Responsive Web Design](#) · [AWS S3](#) + [CloudFront](#) · [UI/UX](#)

- Designed and deployed a fully responsive portfolio website at jaisongeorge04.github.io/PortFolio, hosted on AWS S3 with CloudFront CDN for global low-latency delivery.
- Implemented animated components, smooth-scroll navigation, downloadable resume, and social media integration to maximize recruiter engagement and personal branding.
- Achieved cross-browser compatibility and WCAG accessibility standards through semantic HTML5 structure and mobile-first responsive design principles.

EDUCATION

Master of Computer Applications (MCA)

Aug 2025 – May 2027 (Pursuing)

Lead College Autonomous, Palakkad

B.Sc. Computer Science

Aug 2022 – Mar 2025

St. Thomas College, Kozhencherry — Mahatma Gandhi University

CERTIFICATIONS

- Fundamentals of Digital Marketing — Google Digital Garage
- Prompt Engineering for Developers — DeepLearning.AI
- Introduction to Cybersecurity — Cisco Networking Academy
